Introduction:

This software, called Campus Hub is an Education Management System (EMS), it will be created to make maintaining student data easier and more efficient administratively. It will offer educational institutions an all-in-one platform to effectively manage fee payments, track attendance, and handle student records.

Purpose of the Project:

The purpose of this project is to overcome problems faced by educational systems and provide following facilities.

- 1. Centralized Student Data Management:** To offer a safe and well-organized platform for the management and archiving of academic records, personal data, and student records.
- 2. Streamlined Attendance Tracking:** To make it simple to record, track, and report student attendance while maintaining accuracy and reducing human error.
- 3. Automated Fee Management:** To increase the efficiency of financial administration by streamlining the management of fee structures, payment monitoring, and outstanding balances.
- 4. Improved Accessibility:** To guarantee that all required student data is easily available to authorized personnel, including teachers, administrators, and staff, thereby enhancing communication and decision-making.
- 5. Instructor Dashboard:** For handling both personal and work-related data. Post reminders and essential updates for students. Distribute the deadlines and assignments. Manage the details and courses that have been assigned to you. Exchange study guides and lesson ideas.

Features of the Project:

For Admin:

- 1.Course Allocation:** The teacher can allocate courses for students that will be shown to them.
- 2.Fee Management:** Manages the financial transactions related to student fees, including payment records and overdue fees.
- 3.Timetable Management:** Administrators can create and manage class timetables for both students and teachers.
- 4. Student Record Management:** Administrators will be able to manage all the data entered by students their records etc.

For Teachers:

- 1.Announcemnt:** Can make announcement that will be shown to the students.

2.Course Management: Teachers can manage their assigned courses, including adding materials, setting assignments, and grading.

3.Viewing Student Data: Teachers can access and view students' data, such as academic records, attendance, and personal information.

For Students:

1. Student Record Management: Students will be able to keep track of his/her official record.

2. Attendance Tracking: Facilitates the easy recording and viewing of student attendance for educators and administrators.

3. Fee Management: Oversees and records tuition payments, schedules of fees, and unpaid amounts.

4. Personal Information Management: Guarantees the safe and convenient storage of student contact information, guardian information, and other personal data.

5. Student Courses: Students can view available courses and register for them.

Technologies Used:

The technology used in this project is Java.

Division of Responsibilities:

- ❖ **Aqsa Ahmed** was responsible for refining the content and preparing the written to effectively communicate the project's features. Also provided an overview ensuring a clear and cohesive understanding of its scope and purpose.
- ❖ **Simaab Malik** provided the necessary content and details needed for the project. Ensured that all relevant information was well organized and aligned with the project's requirements.
- ❖ **Hoor Spogmay** took charge of generating the idea , conducting research and finalizing the document. Played a key role in analyzing the project's feasibility and ensuring its alignment with current educational needs.

Signed Consent:

- Hoor Spogmay

-
- Simaab Malik

- Aqsa Ahmed

Conclusion:

The development of this Campus Hub will lead to a significant improvement in the efficiency and accuracy of managing student data and school administrative tasks. By centralizing all student information, institutions can streamline their operations, reducing manual work and minimizing errors. The automated features, like attendance tracking and fee management, will save time for both teachers and administrators, allowing them to focus more on core educational activities. Enhanced accessibility ensures that authorized personnel can easily retrieve relevant information, leading to better decision-making and smoother communication across departments. Ultimately, this will foster a more organized, secure, and user-friendly environment for managing education-related processes.
